

Abstract

The invention concerns a method (200) and system (100) for generating a customized video recording compilation. The invention comprises the steps of: presenting (212) a menu which lists at least a portion of video segments recorded on a first storage medium; prompting (214) a user to select at least one video segment from the menu; compiling (218) each video segment selected by the user to create at least one compilation; and inserting (220) the compilation as a new item in the menu. The invention can also include the step of transferring (228) a video segment in the compilation from the first storage medium to a second storage medium. The invention can also include the step of automatically transferring (230) a plurality of video segments in the compilation from the first storage medium to a second storage medium without any user interaction following the initiation of the transferring step.
